

Install Peptora

Quick guide for Android

5 steps · ~3 minutes

This is a preview build for friends. The app isn't on Google Play yet, so this time you'll install it manually. Once it's on Play, you'll get automatic updates as usual.

Step by step

1

Download the app

Open the link you were sent and tap **Download**.

Your browser might warn you that this is „not commonly downloaded" — pick **Download anyway / Keep**. The file lands in your *Downloads* folder.

2

Open the file

Swipe down from the top of your phone to open the notification shade and tap the download notification — or open the **Files** app and select **Peptora.apk** in your Downloads folder.

3

Allow installation (just once)

Your phone will ask if you trust the source. Tap **Settings**, turn on „**Allow from this source**", and tap Back.

This is an Android security setting. You only need to do it once for whichever app you're using to open the file (usually Chrome or Files).

4

Install

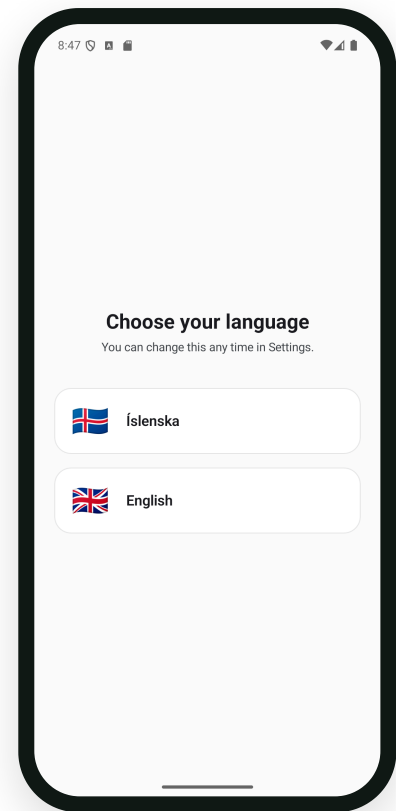

Tap **Install**. Wait 2–3 seconds while the app installs, then tap **Open**.

5

Pick a language & start

The app opens on the language picker. Tap **English** and answer a few quick questions (gender, peptide experience).

You can change the language later in *Settings*.

Something not working?

- **The „Install“ button is grayed out.** You skipped allowing installation — go back to step 3.
- **The app won't open after installing.** Restart your phone and try again.
- **The file is „corrupted“ or „invalid“.** Delete the APK and download it again — it may have been truncated on the way.
- **Other issue?** Email info@peptora.app.
